## 1. <u>Review of India's Energy Policies</u>

#### Why in News?

The International Energy Agency (IEA) has released the first in-depth review of India's energy policies.

- The report highlights the achievements of India's energy policies.
- It also provides recommendations to support the government's goals of promoting well-functioning energy markets and boosting deployment of renewables.

# **International Energy Agency**

- The IEA was created in 1974 to help coordinate a collective response to major disruptions in the supply of oil.
- It is made up of 30 member countries. It also includes 8 association countries.
  - India has been an IEA-association country since March 2017.
- It is an autonomous inter-governmental organisation within the **Organisation for Economic Co-operation and Development (OECD)** framework, headed by its Executive Director.
- It is headquartered in Paris, France.
- IEA regularly conducts in-depth reviews of energy policies for its member and association countries.
  - This is the first review carried out for India.

### **Key Findings**

- Policies Appreciated:
  - Government's achievements in extending citizens' access to electricity, affordable efficient lighting and clean cooking through historic schemes like SAUBHAGYA, UJALA and UJJWALA.
  - Energy efficiency improvements in India avoided 15% of additional energy demand, oil and gas imports, and air pollution as well as 300 million tonnes of CO<sub>2</sub> emissions between 2000 and 2018.
  - Government policies designed to conduct large-scale renewable energy auctions, open up coal mining to private companies, and promote access to oil and gas markets for foreign investors.
- There is strong **growth of renewables in India**, which accounts for almost **23% of the country's total installed capacity**.
- India's Demand for Energy:
  - The country's demand for energy is set to double by 2040, and its electricity demand may triple.

- Indian oil consumption is expected to grow faster than that of any other major economy (including China).
- India's oil demand is expected to reach 6 million barrels per day (bpd) by 2024 from 4.4 million bpd in 2017, but its domestic production is expected to rise only marginally, making the country more reliant on crude imports and more vulnerable to supply disruption in the Middle East.
- Recommendations:
  - NITI Aayog can play a strong role in working with the states to implement power sector reforms, advanced grid integration, improve flexibility and coordinate energy policy decisions.
  - The review encourages India to institutionalise energy policy coordination across government with a national energy policy framework.
  - India should also to expand its Strategic Petroleum Reserves (SPR).
