

Delhi's New Smog Tower

 drishtias.com/printpdf/delhi-s-new-smog-tower

Why in News

Recently, the Chief Minister of Delhi inaugurated the **country's first 'smog tower'** in **Connaught Place**.

It was inaugurated months before the **pollution level spikes in the national capital due to burning of crop waste (stubble burning) by farmers.**

Key Points

- **Background:**

- In 2019, the **Supreme Court** directed the **Central Pollution Control Board (CPCB)** and the Delhi government to come up with a plan to install smog towers to combat air pollution.
- **IIT-Bombay then submitted a proposal** for the towers to the CPCB.
- In January 2020, the **Supreme Court directed that two towers** should be installed by April as a **pilot project**.
- The **smog tower at Connaught Place (CP) is the first of these towers**. The second tower, being constructed at Anand Vihar in east Delhi with CPCB as the nodal agency, is nearing completion.

- **About:**

- Smog towers are structures **designed to work as large-scale air purifiers**.
- They are usually fitted with **multiple layers of air filters**, which clean the air of pollutants as it passes through them.
- **China has the world's largest smog tower**.

- **Working of the Tower:**

It uses a **'downdraft air cleaning system'** where polluted air is sucked in at a height of 24 m, and filtered air is released at the bottom of the tower, at a height of about 10 m from the ground.

It is **different from the system used in China**, where a 60-metre smog tower uses an **'updraft' system** — air is sucked in from near the **ground**, and is **propelled upwards by heating and convection**. Filtered air is released at the top of the tower.

- **Developed by:**

- **Tata Projects Limited (TPL)** built it with technical support from **IIT-Bombay and IIT-Delhi**, which will analyse its data.
- **National Biofuel Coordination Committee (NBCC) India Ltd** is the project management consultant.
- **Delhi Pollution Control Committee** was in charge of the Project.

- **Need:**

- According to a report by CPCB, an increase of **258% to 335%** has been observed in the **concentration of PM10 in Delhi** since 2009.
- But the **most prominent pollutant in Delhi and neighbouring areas is PM2.5**
PM2.5 refers to **fine particles which penetrate deep into the body and fuel inflammation in the lungs and respiratory tract**, leading to risks of cardiovascular and respiratory problems, including a weak immune system.
- **Delhi was the most polluted capital city** in the world in 2020 for the third consecutive year, according to a report by a **Swiss group (released in March 2021)** that ranked cities based on their air quality **measured in terms of the levels of ultrafine particulate matter (PM 2.5)**.

- **Challenges:**
 - It may **provide immediate relief from air pollution in a small area** but they are a **costly quick-fix measure with no scientific evidence** to back their efficacy in the long term.
 - The tower **could have an impact on the air quality up to 1 km from the tower.** However, the **actual impact will be assessed by IIT-Bombay and IIT-Delhi** in a **two-year pilot study** that will also determine how the tower functions under different weather conditions, and how levels of PM2.5 vary with the flow of air.
- **Other Steps Taken to Tackle the Problem of Pollution in Delhi:**
 - **Subsidy to farmers** for buying **Turbo Happy Seeder (THS)** which is a machine mounted on a tractor that cuts and uproots the stubble, in order to reduce stubble burning.
 - The introduction of **BS-VI vehicles**, push for **electric vehicles (EVs)**, **Odd-Even** as an emergency measure and construction of the Eastern and Western Peripheral Expressways to reduce vehicular pollution.
 - Implementation of the **Graded Response Action Plan (GRAP)**. It is a set of curbs triggered in phases as the air quality deteriorates, which is typical of the October-November period.
 - Use of **Green Crackers.**
 - Development of the **National Air Quality Index (AQI)** for public information under the aegis of the CPCB.

Way Forward

- Since there is **no scientific evidence that proves its efficiency**, governments should instead **address root causes and promote renewable energy** to tackle air pollution and **reduce emissions.**
- It will be **really unfortunate if other cities decide to follow suit and set up these expensive, ineffective towers.**
