

Artificial Insemination of Goats

 drishtias.com/printpdf/artificial-insemination-of-goats

Why in News

Recently, **the artificial insemination carried out by the Central Sheep Breeding Farm, Hisar** sometime back has shown positive results.

Key Points

- A trial conducted by Central Sheep Breeding Farm, Hisar on 50 goats found that a goat produced by artificial insemination gives 1.5 liters of milk as compared to an average of 800 grams of milk given by a normal goat.
- So far, artificial insemination has been done in cows and buffaloes, but now it is also being done in goats, which will produce good breed and high weight goats.
- There are 26 types of goat breeds in the country. Goat's milk is beneficial in terms of health due to the low fat content with up to 4 percent protein content.
