

# India Lifted 271 Million People Out of Poverty

---

 drishtiias.com/printpdf/india-lifted-271-million-people-out-of-poverty

## Why in News

---

According to India's **Voluntary National Review (VNR) of Sustainable Development Goals (SDG)** at least **271 million** people were **lifted out of multi-dimensional poverty** between 2005-06 and 2016-17.

The **VNR of SDGs** has been presented by the **Niti Ayog** at the High-Level Political Forum on Sustainable Development.

## Key Points

---

- **Related Data:**
  - The estimates presented were drawn from the 2019 **global Multidimensional Poverty Index (MPI)** released in July 2019.
  - Over **640 million people** across India were in multidimensional poverty in 2005-2006.
  - The number of people living under **poverty decreased to around 369.55 million** by 2016-2017.
  - However, 27.9% of India's population was still poor in 2016-17
- **Poverty Reduction:** In rural areas poverty reduction has outpaced that in urban areas.

## Multidimensional Poverty Index

- The Multidimensional Poverty Index was launched by the **United Nations Development Programme (UNDP)** and the Oxford Poverty & Human Development Initiative (OPHI) in 2010.
- MPI is based on the idea that **poverty is not unidimensional** (not just depends on income and one individual may lack several basic needs like **education, health** etc.), rather it is **multidimensional**.
- The index shows the **proportion of poor people** and the **average number of deprivations** each poor person experiences at the same time.

- MPI uses three dimensions and ten indicators which are:
  - **Education:** Years of schooling and child enrollment (1/6 weightage each, total 2/6);
  - **Health:** Child mortality and nutrition (1/6 weightage each, total 2/6);
  - **Standard of living:** Electricity, flooring, drinking water, sanitation, cooking fuel and assets (1/18 weightage each, total 2/6)
  - A person is **multidimensionally poor** if she/he is deprived in one third or more (means 33% or more) **of the weighted indicators** (out of the ten indicators). Those who are deprived in one half or more of the weighted indicators are considered living in **extreme multidimensional poverty**.
  - MPI is significant as it recognizes poverty from different dimensions compared to the conventional methodology that measures poverty only from the income or monetary terms.

## Way Forward

---

- As the **Covid-19** feared to make the country poorer, India would need to recount its poor.
- Therefore, measuring and monitoring progress under the goal to reach '**zero poverty by 2030-Goal 1 of the SDGs**', needs a reality check on India's poor.
- While **consumption surveys** provide **important indicators required to estimate poverty**, the all-India survey on household consumption expenditure for the period July 2017-June 2018 was scrapped by the Ministry of Statistics and Programme Implementation citing "**data discrepancies**".
- Hence, there is a need to incorporate **data quality refinements** in the survey process for conducting the next **Consumer Expenditure Survey** in 2020-2021 and 2021-22.
