

SEBI Bans Derivative Trade in Agriculture Commodities

For Prelims: Capital Market, Derivative Trading, Inflation, Options, Futures, Forwards, Swaps

For Mains: Reasons for Derivative trading suspension and its impact, Significance and concerns related to Derivative trading.

Why in News

Recently, the [**Securities and Exchange Board of India \(SEBI\)**](#) has banned the derivative trade of seven agricultural commodities on the future's platform of [**National Commodities and Derivatives Exchange \(NCDEX\)**](#) for a year.

- The regulator has banned derivative contracts trade in **chana, wheat, paddy (non-basmati), soyabean and its derivatives, mustard seed and its derivatives, crude palm oil and moong** for a year with immediate effect.
- The commodity derivatives market **has been prone to such sudden suspensions of trading in agriculture items** ever since it was introduced under the erstwhile [**Forward Markets Commission \(FMC\)**](#).

SEBI

- It is a **statutory body established on 12th April, 1992** in accordance with the provisions of the [**Securities and Exchange Board of India Act, 1992**](#).
- The basic functions of the SEBI is to **protect the interests of investors in securities and to promote and regulate** the securities market.

Key Points

- **Reasons for Ban:**
 - **To cool off Food Inflation:**
 - [**India's retail inflation**](#) rose to a three-month high of 4.91 % in November from 4.48 % in the previous month primarily because of **a rise in food inflation to 1.87 % from 0.85 % over this period.**
 - **Double Digits WPI:**
 - [**Wholesale Price Index-based inflation**](#) has remained in double digits for eight consecutive months beginning in April, mainly because of surging prices of food items.
 - In November, the wholesale price-based inflation surged to a **record high of 14.23 %** amid hardening of prices of mineral oils, basic metals, crude petroleum and natural gas.
 - **To insulate future Price Shock:**

- In view of **Rabi Output** that might be affected morbidly because of fertiliser shortage faced in many parts of the country.
- By banning future's trade, the government is trying to insulate any price shock the market might feel in the days to come in case the production is not up to par.

▪ **Impact:**

- The suspension comes ahead of the rabi crop, sown in winter, hitting the markets in a couple of months. With no reference price, **traders will be clueless on future sentiment.**
- Importers, who hedge on the derivative market to safeguard themselves from price moves, may be more **vulnerable**.
- Impact on prices initially, the outlook will be bearish **as traders rush to square off open positions on derivatives.**

Derivatives

▪ **About:**

- Derivatives are the instruments which include security **derived from a debt instrument share, loan, risk instrument or contract** for differences of any other form of security and a contract that derives its value from the price/index of prices of underlying securities.
- In the finance field, a derivative is a contract **that derives its value from the performance of an underlying entity**. This underlying entity can be an asset, index, or interest rate, and is often called the "**underlying**".

▪ **Types:**

- **Forwards and futures:**
 - These are financial contracts that obligate the contracts' **buyers to purchase an asset at a pre-agreed price on a specified future date**. Both forwards and **futures** are essentially the same in their nature.
- **Options:**
 - Options provide the buyer of the contracts the **right, but not the obligation, to purchase or sell the underlying asset** at a predetermined price.
 - Based on the option type, **the buyer can exercise the option on the maturity date** or on any date before the maturity.
- **Swaps:**
 - Swaps are derivative contracts **that allow the exchange of cash flows between two parties**.
 - The swaps **usually involve the exchange of a fixed cash flow for a floating cash flow**.
 - The most popular types of swaps are interest rate swaps, commodity swaps, and currency swaps.

▪ **Significance:**

- **Hedging Risk Exposure:**
 - Since the value of the derivatives is linked to the value of the underlying asset, the **contracts are primarily used for hedging risks**.
 - In this way, **profits in the derivative contract may offset losses** in the underlying asset.
- **Underlying Asset Price Determination:**
 - Derivatives are frequently **used to determine the price of the underlying asset**. For example, the spot prices of the futures can serve as an approximation of a commodity price.
- **Market Efficiency:**
 - It is considered that **derivatives increase the efficiency of financial markets**. By using derivative contracts, one can replicate the payoff of the assets.
 - Therefore, the prices of the underlying asset and the associated derivative tend to be in equilibrium to avoid arbitrage opportunities.
- **Access to unavailable assets or markets:**
 - Derivatives can help organisations **get access to otherwise unavailable assets or markets**.
 - By employing interest rate swaps, a company may obtain a more favourable interest rate relative to interest rates available from direct borrowing.

- **Issues:**

- **High Risk:**

- The high volatility of derivatives **exposes them to potentially huge losses**. The sophisticated design of the contracts makes the valuation extremely complicated or even impossible. Thus, they bear a high inherent risk.

- **Speculative Features:**

- Derivatives are widely regarded as a **tool of speculation**. Due to the extremely risky nature of derivatives and their unpredictable behaviour, unreasonable speculation may lead to huge losses.

- **Counterparty Risk:**

- Although derivatives traded on the exchanges generally go through a thorough due diligence process, some of the contracts traded over-the-counter do not include a benchmark for due diligence. **Thus, there is a possibility of counterparty default.**

National Commodities and Derivatives Exchange

- NCDEX is **an online commodities exchange dealing primarily in agricultural commodities** in India.
- It is a **public limited company**, established on 23rd April 2003 under the **Companies Act, 1956**.
- The exchange was **founded by some of India's leading financial institutions** such as ICICI Bank Limited, the National Stock Exchange of India and the **National Bank for Agricultural and Rural Development**, among others.
- These include 25 contracts for agricultural products. NCDEX is run by an independent board of directors with no direct interest in agriculture.
