

## **Most Promising Astronomical Site: Hanle**

## Why in News

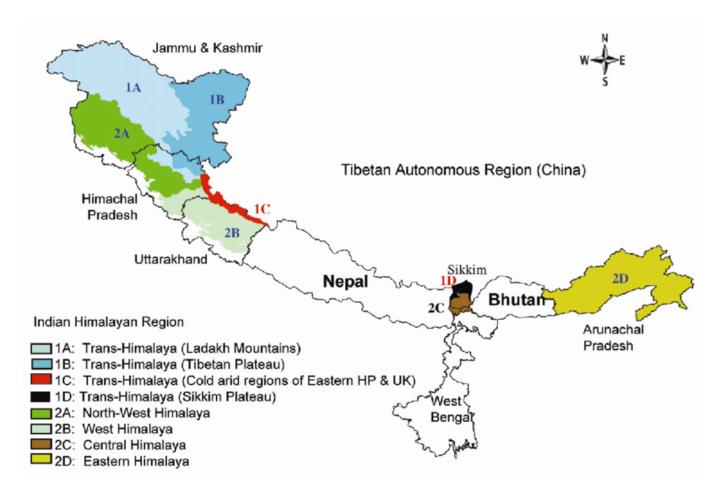

According to a recent study, the **Indian Astronomical Observatory (IAO)** located at Hanle near Leh in Ladakh is becoming one of the promising observatory sites globally.

 The Indian Astronomical Observatory has one of the world's highest sites for optical, infrared and gamma-ray telescopes.

## **Key Points**

## About:

- Hanle site is as dry as the <u>Atacama Desert</u> in Chile and much drier than Devasthal (Uttarakhand) and has around 270 clear nights in a year and is also one of the emerging sites for infrared and sub-mm optical astronomy.
  - This is **because water vapour absorbs electromagnetic signals** and reduces their strength.
- It has advantages of more clear nights, minimal <u>light pollution</u>, background <u>aerosol</u> concentration, extremely dry atmospheric conditions, and uninterrupted <u>monsoon</u>
- Such conditions are considered crucial for astronomers to build huge telescopes and plan for future observatories and predict how they will vary with time.
- Other Promising Sites:
  - Merak observatories in Ladakh.
  - **Devasthal** in Nainital, Ali Observatory in the <u>Tibet</u> **Autonomous Region** in China.
  - South African Large Telescope in South Africa.
  - University of Tokyo Atacama Observatory and Paranal in Chile.
  - Mexico's National Astronomical Observatory.
- Trans- Himalayan Region:
  - The Trans-Himalayas Mountain Region or Tibet Himalayan Region is located to the north of the Great Himalayas which consists of <u>Karakoram</u>, <u>Ladakh</u>, Zaskar and Kailash mountain ranges.
    - It is also called the **Tibet Himalayan Region** because most of the part of these ranges lies in Tibet.
  - They are the eastward continuation of the most northerly ranges of the Himalayas.
  - It consists of an **ill-defined mountain area** about 600 miles long and 140 miles wide in the centre, narrowing to a 20-mile width at the eastern and western ends.
  - It is mainly composed of **granites** and **volcanic rocks** of the Neogene and Paleogene age.
