Edible Oil Prices and Significance for India

For Prelims: Edible Oil, Covid-19, Black Sea, Black Sea Grain Initiative, Mission on Edible Oils-Oil Palm.

For Mains: Edible Oil Prices and Significance for India.

Why in News?

Edible oils have experienced significant **Price volatility** over the past 2-3 years.

 The global vegetable oils price index of the <u>UN Food and Agriculture Organization</u> experienced a significant drop to 77.8 points (2014-16 base period value = 100) in May 2020 during the peak of global Covid lockdowns. However, it reached an all-time high of 251.8 points in March 2022 following Russia's invasion of Ukraine.

What are the Factors for Volatility in Edible Oil Price?

- The war between Ukraine and Russia disrupted the world's supply of this oilseed, as the <u>Black Sea</u> ports were shut off.
 - Ukraine and Russia accounted for nearly **58% of global production in 2021-22**, causing prices to skyrocket.
- The situation changed with the <u>Black Sea Grain Initiative</u> agreement between Russia and Ukraine, brokered by the UN and Turkey. The agreement facilitated the safe navigation of vessels carrying grain and foodstuffs from designated Ukrainian ports.
- This led to the shipping out of accumulated sunflower oil, meal, and seed from Ukraine, resulting in international vegetable oil prices falling below pre-war levels.

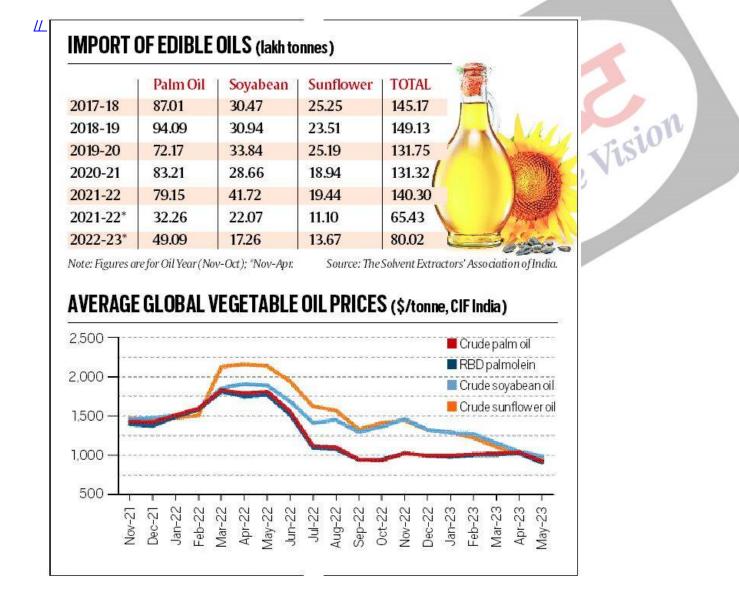

What does this Translate into for India?

- Reduction in Cost:
 - The import of sunflower oil in India has the potential to significantly reduce the price of edible oils in the country. By importing sunflower oil, which has a landed cost of approximately USD 950 per tonne, the **overall cost of edible oils in India can be** reduced.
- Impact on Consumers:
 - When prices soared, many households and institutional consumers such as restaurants and canteens switched from sunflower oil to relatively cheaper alternatives like soybean oil or local oils.
 - However, as import flows and price parity have been restored, consumers are returning to sunflower oil.
- Market Expansion:
 - Sunflowers are traditionally grown in Karnataka, Telangana, and Maharashtra.
 - Roughly 70% of the country's sunflower oil consumption is in the South, with Maharashtra (10-15%) and other states making up the rest.
 - This regional concentration presents a substantial market for sunflower oil products.

- Meeting the Demand:
 - Over the past decade, domestic production of sunflower oil has declined to insignificant levels. This decline opens up **opportunities for imports to meet the growing demand** for sunflower oil in the country.
 - The decline in domestic production and the preference for sunflower oil in certain regions create potential for increased imports of sunflower oil. Importers and sellers can play a significant role in meeting the market demand for branded sunflower oil.

What is the Scenario of Consumption of Cooking Oil in India?

- India consumes 23.5-24 million tonnes (mt) of cooking oil annually, out of which 13.5-14 mt is imported and the balance 9.5-10 mt produced from domestically cultivated seed.
- Sunflower is the fourth largest consumed oil (2-2.5 mt), behind mustard (3-3.5 mt), soyabean (4.5-5 mt) and palm (8-8.5 mt).
 - Both sunflower and palm oil are **almost wholly imported**, with their domestic production at hardly 50,000 tonnes and 0.3 mt respectively.
 - This is unlike **mustard and soyabean**, where the share of domestic output is close to 100% and 30-32% respectively.

What are the Initiatives Related to Cooking Oil in India?

 The government launched the National <u>Mission on Edible Oils-Oil Palm</u> as a centrally sponsored scheme, being implemented jointly by the central and state governments with a special focus in the northeast region and the Andaman and Nicobar Islands.

- It is proposed to have an additional 6.5 lakh hectares for palm oil by 2025-26.
- In order to improve and systemize the data management system in the vegetable oil sector, the Directorate of Sugar & Vegetable Oils under Department of Food and Public Distribution has developed a web-based platform (evegoils.nic.in) for online submission of inputs by vegetable oil producers on a monthly basis.
 - The portal also provides a window for online registration and submission of monthly production returns.

UPSC Civil Services Examination, Previous Year Question (PYQ):

Prelims:

Q. Consider the following statements: (2018)

- 1. The quantity of imported edible oils is more than the domestic production of edible oils in the last five years.
- 2. The Government does not impose any customs duty on all the imported edible oils as a special case.

Which of the statements given above is/are correct?

(a) 1 only

- (b) 2 only
- (c) Both 1 and 2
- (d) Neither 1 nor 2

Ans: (a)
