

Allium Negianum: A New Species of Onion

Why in News

Recently, a newly discovered plant **Allium negianum**, in Uttarakhand has been confirmed to belong to the genus that includes many staple foods such as <u>onion</u> **and garlic**.

• A **staple food** makes up the **dominant part of a population's diet.** They are eaten regularly—even daily—and supply a major proportion of a person's energy and nutritional needs.

Key Points

About: //

- Allium is one of the largest genera in Amaryllidaceae.
 - Amaryllidaceae is a family of herbaceous (connected with plants that have soft stems), mainly perennial and bulbous flowering plants.
- The genus Allium contains about 1,100 species worldwide, including many staple foods like onion, garlic, scallion, shallot and chives.
- The genus naturally occurs in dry seasons in the <u>northern hemisphere</u> and South Africa but the newly-identified species is restricted to the region of the western Himalaya.
- The scientific name Allium negianum honours the late Dr. Kuldeep Singh Negi, an eminent explorer and Allium collector from India.
 - They are useful for various medicinal purposes.
- Distribution in India:
 - The Indian Allium is distributed in different eco-geographical areas of the temperate and alpine regions of Himalayas.
 - The Indian Himalayan region has two distinct centers of Allium diversity, the Western
 Himalaya (over 85% of total diversity) and the Eastern Himalaya (6%), covering the
 alpine-sub temperate region.
- Condition of Growth:

It grows at 3,000 to 4,800 m above sea level and can be found along open grassy
meadows, sandy soils along rivers, and streams forming in snow pasture lands along
alpine meadows.

Threat:

• Indiscriminate **harvesting of its leaves and bulbs** for seasoning may pose a threat to its wild populations.
