

Glycosmis Albicarpa

Why in News

A team of scientists from the **Botanical Survey of India (BSI)** has discovered a **new gin berry species** named **Glycosmis albicarpa** from the **Kanyakumari Wildlife Sanctuary** in Tamil Nadu.

- BSI, established in 1890, is the apex research organisation under the Ministry of Environment and Forests (MoEFCC) for carrying out taxonomic and floristic studies on wild plant resources of the country.
- It has the objective to explore plant resources of the country and to identify plant species with economic virtues.

What Is Glycosmis Albicarpa?

- The species is endemic to the southern Western Ghats.
- The species belongs to the Orange family, Rutaceae.

- Many of the related plants of these taxonomic groups are being utilised for their medicinal values and food.
- Most commonly related species of these plants are collected from the wild, mainly for local use as food and medicine.
- Berries of Glycosmis species have the unique characteristic of 'gin aroma' and have gained in popularity as an edible fruit.
- The species is also a larval host plant for butterflies like other species of Glycosmis.

What are the Key Points Related to Kanyakumari Wildlife Sanctuary?

- Kanyakumari Wildlife Sanctuary is a 402.4 km² protected area in Kanyakumari district,
 Tamil Nadu.
 - The virgin forests of Kanyakumari District were transferred from Kerala to Tamil Nadu on the 1st November 1956 as a result of the state reorganisation.
- Kanyakumari Forest Division came into existence from 1st April 1977.
- Kanyakumari Wildlife sanctuary with adjacent areas of Kalakkad Mundanthurai Tiger Reserve and Neyyar Wildlife Sanctuary of Kerala State constitutes the southernmost tip of Western Ghats.
 - It is a <u>tiger</u> **habitat.** There are seven rivers that originate in this forest.

- The natural vegetation of this region represents biomes ranging from southern thorn forests, dry deciduous, moist deciduous, semi evergreen forests to ever green hill sholas with grassy downs.
 - The <u>Shola forests</u> of South India derive their name from the Tamil word solai, which means a 'tropical rainforest'.
 - The Sholas are found in the upper reaches of the Nilgiris, Anamalais, Palni hills, Kalakadu, Mundanthurai and Kanyakumari in the states of Tamil Nadu and Kerala.
- The tract is exceedingly **rich in wildlife harbouring a variety of animals such as** <u>Indian bison</u>, <u>elephants</u>, <u>rock pythons</u>, <u>lion tailed macaques</u> etc. The avifauna, the reptilian and amphibian fauna of this region are also rich and diverse.
- This tip of the Indian peninsula is a unique geographic point surrounded by all three of the subcontinent's vast oceans - the Bay of Bengal, Indian Ocean and the Arabian Sea.

Protected Areas in Tamil Nadu

PYQ

Recently, our scientists have discovered a new and distinct species of banana plant which attains a height of about 11 metres and has orange coloured fruit pulp. In which part of India has it been discovered?

(2016)

- (a) Andaman Islands
- (b) Anaimalai Forests
- (c) Maikala Hills
- (d) Tropical rain forests of northeast

Ans: (a)
