

## Mains Practice Question

Coronaviruses (CoV) are a large family of viruses that cause illness ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome and Severe Acute Respiratory Syndrome. A novel coronavirus (nCoV) is a new strain that has not been previously identified in humans. It was first discovered in the Wuhan province of China and by February 2020, it has affected more than 70,000 people and caused more than 1700 deaths around the world. The World Health Organization has declared it a “global health emergency”.

It has come to the notice that, while the first case of Coronavirus was reported on 8 December 2019, the Wuhan Health Authorities took more than 3 weeks to issue a notice. Even when Doctor Li Wenliang, who warned of the Virus was forced to sign a police statement for 'illegal behaviour'. The secret and authoritarian regime of China, lead to the proliferation of a deadly virus which constitutes now a global emergency.

- a. Identify the ethical issues involved in the case.
- b. What should be the role of the World Health Organization and the United Nations to prevent the spread of such deadly diseases.
- c. How can conflict between the sovereignty of a nation and global governance be resolved?
