

World's Largest Deep Sea Coral Reef

Source: DH

Why in News?

Scientists have mapped the largest known **deep-sea coral reef**, located off the **Atlantic coast** of the **United States**.

The reef's existence has been acknowledged by scientists since the 1960s, but only recently has the advent of underwater mapping technology enabled the creation of clear 3D images depicting its dimensions.

What are the Features of the Newly Found Reef?

- About:
 - The reef spans approximately 500 km in length, stretching from Florida to South Carolina. At certain points, its width reaches up to 110 km.
 - The reef's area is almost three times larger than Yellowstone National Park.
 - Discovered at depths ranging from 200 to 1,000 meters, the reef exists in areas beyond the reach of sunlight.
 - Unlike the recently found coral reef which is the largest in deep water, the Great Barrier Reef is the largest coral reef system in Shallow water
 - A scientist mentioned the potential discovery of larger deep-sea reefs in the future, pointing out that only approximately 25% of the world's ocean floor has been thoroughly mapped in high resolution.

What is the Difference Between Deep and Shallow Water Coral Reef?

| Specifications | Shallow Water Coral | Deep Water Coral |
|-----------------------|------------------------------|--|
| Appearance | Brown & Green | White |
| Diversity | High | Low |
| Food | Rely on Photosynthetic algae | Feed on small plankton or available |
| | | organic material |
| Habitats | Provides to sponges, crabs, | Provides to Sharks, Swordfish, Octopus |
| | etc | etc |
| Type of | Rock Like | Groves in the form of feathers, trees, |
| Structure | | etc |
| Growth Process | Require sunlight | Don't require Sunlight |
| Distribution | Less coverage of ocean floor | Larger Coverage of ocean floor |
| Challenges | Climate Change, Disturbance | Climate Change, Disturbance from Oil |
| | from Oil and Gas Drilling | and Gas Drilling |

Coral Reefs

(Rainforests of the seas)

About

- Large underwater structures made of skeletons of colonial marine invertebrates 'coral' – individually called polyp
- Symbiotic Relationship with algae 'zooxanthellae' (responsible for beautiful colours of corals)
- ¥ Support over 25% of marine biodiversity

Hard Corals vs Soft Corals

- Hard Corals Rigid skeleton made of CaCO₃ - reef-building corals
- ¥ Soft Corals Non reef-building

Great Barrier Reef (Australia)

- ¥ Largest Coral Reef in the World
- ¥ World Heritage Site (1981)
- ▼ Endures Mass Coral Bleaching

Corals in India

Present in the areas of Gulf of Kutch, Gulf of Mannar, Andaman & Nicobar, Lakshadweep Islands and Malvan

Significance

- Coral reefs protect coastlines from storms/erosion, provide jobs, offer opportunities for recreation
- Source of food/medicines

Threats

- Natural: Temperature, Sediment Deposition, Salinity, pH, etc.
- Anthropogenic: Mining, Bottom Fishing, Tourism, pollution, etc.

Coral Bleaching

- Corals under stress expel algae thus turning white (bleached)
- Bleached corals not dead but, more risk of starvation/disease

Initiatives to Protect Corals

Technology

- ▼ Cyromesh: Storage of the coral larvae at (-196°C) Can be later reintroduced to the wild
- Biorock: Creating artificial reefs on which coral can grow rapidly

Global

- ▼ The Global Coral Reef R&D Accelerator Platform

Indian

National Coastal Mission Programme

UPSC Civil Services Examination, Previous Year Questions (PYQ)

Prelims

Consider the following statements: (2018)

- 1. Most of the world's coral reefs are in tropical waters.
- 2. More than one-third of the world's coral reefs are located in the territories of Australia, Indonesia and Philippines.
- 3. Coral reefs host far more number of animal phyla than those hosted by tropical rainforests.

Which of the statements given above is/are correct?

- (a) 1 and 2 only
- **(b)** 3 only
- (c) 1 and 3 only
- (d) 1, 2 and 3

Ans: (d)

Mains:

Q. Assess the impact of global warming on the coral life system with examples. (2019)
