

### **Road to Smart and Precise Agriculture**

This editorial is based on <u>"Precision farming needs to be promoted to get more output with less exploitation of natural resources"</u> which was published in The Indian Express on 03/09/2022. It talks about the status of Agriculture in India and sustainable measures for its development.

**For Prelims:** Biosecurity, Soil Health Card Scheme, NABARD, Minimum Support Price, E-NAM Portal, Paramparagat Krishi Vikas Yojana (PKVY), National Mission For Sustainable Agriculture (NMSA), AgriStack, Micro Irrigation Fund, Biosecurity

**For Mains:** Significance of Agriculture in the Indian Economy, Recent Government Initiatives for the Development of the Agriculture Sector, Blending Traditional and Frontier Technologies in Agriculture

The <u>Green Revolution in India</u> that started in the **1960s** enabled the nation to make great strides in **domestic food production** and significantly contributed to progress in agriculture and allied sectors. It transformed India from a food-deficit nation to a food-surplus, export-oriented country.

In India, **70% of rural households still depend primarily on agriculture** for their livelihood, with 82% of farmers being small and marginal.

However, now India is facing second-generation problems, especially related to sustainability, nutrition, the **adoption of new agricultural technologies** and income levels of the population dependent on farming.

#### What is the Significance of Agriculture in the Indian Economy?

- Food Security and Induced Growth of Industrial Sector: Flourishing Agricultural production in India is the main factor behind the food security of the large Indian population.
  - Agriculture supplies raw materials to various agro-based industries like sugar, jute, cotton textile and vanaspati industries. Food processing industries are similarly dependent on agriculture.
  - Increase in rural purchasing power is very necessary for industrial development as twothirds of the Indian population live in villages.
    - After the green revolution the purchasing power of the large farmers increased due to their enhanced income.
- **Source of Government Revenue:** Agriculture is one of the major sources of revenue to **both the central and State government** of the country. The government is getting a substantial income from **rising** <u>land revenue</u>.
  - Some other sectors like railways, roadways are also deriving a good part of their income from the movement of agricultural goods.
- **Contribution to International Trade:** Agriculture plays an important role in international trade.

Jute, tea, coffee and spices are the country's well known conventional exports.

#### What are the Current Challenges Confronting Indian Agriculture?

- Degrading Soil Health: Due to wind and water erosion, deforestation, and urbanisation, removal of natural vegetation, converting forests to farms is degrading soil health to a large extent.
  - The analysis of the <u>Soil Health Card Scheme</u> shows alarmingly low levels of soil organic carbon (SOC) across India (an important indicator of soil health).
- Shrinking Farm Size: Labour productivity is constrained owing to land sizes. The average farm size in India has been consistently becoming smaller, hampering labour productivity, and limiting economies of scale.
  - Farm size of the majority of the rural household has declined to unviable levels inducing farmers to leave land and look for better job opportunities in cities.
- Per Drop More Crop: At the national level, only 52% of India's gross cropped area (GCA) is under irrigation coverage.
  - Despite significant strides since independence, a large proportion of farms in India still depend on the **monsoon** for irrigation, limiting their ability to increase cropping intensity.
- Lack of Convenient Access to Credit: A convenient line of credit is not available to small and marginal farms. As per the <u>NABARD</u> 2018 survey, farmers with smaller plot sizes took a greater share of loans from the non-institutional lenders than did farmers with larger plot sizes (> 2 hectares)
  - This indicates that more small and marginal farmers rely on (expensive) informal sources of credit than large ones.
- Crop Insecurity: Despite the rapid <u>commercialisation of Indian agriculture</u>, most farmers, especially small and marginal farmers, tend to place cereals at the centre of their cropping system (because of Minimum Support Price) and neglect <u>crop diversification</u>.
- Ineffective Percolation of Policies: Land leasing laws in India have taken forms that discourage formal leasing contracts between the owner and the tenant.
  - There are a large number of unofficial tenancies in the country. Due to the lack of
    identification of tenants, benefits intended for tenant farmers such as <u>disaster relief</u> and
    <u>direct benefit transfers</u> are at risk of being distributed to the land owner who appears to
    be the cultivator on official records.

# What are the Recent Government Initiatives for the Development of the Agriculture Sector?

- E-NAM Portal
- Paramparagat Krishi Vikas Yojana (PKVY)
- Pradhan Mantri Fasal Bima Yojana (PMFBY)
- Micro Irrigation Fund (MIF)
- AgriStack

#### What Should be the Way Forward?

- Blending Traditional and Frontier Technologies: Traditional technologies in the field of <u>rainwater harvesting</u> and <u>recycling of organic waste</u> for plant nutrient, pest management, etc. have been found to be very useful and relevant.
  - In order to bring a synergistic impact, traditional technologies should be blended with the modern frontier technologies like <u>tissue culture</u>, <u>genetic engineering</u>, to achieve higher productivity.
- Input Intensive to Knowledge Intensive Agriculture: India is known for its diversity of farming practices. It is important to get diverse points of view engaged in a national-level dialogue to find suitable solutions for the future.
  - Also, the **Advanced world is moving towards** precision farming using sensors and other

scientific tools for exact practices and application of inputs.

- A smart and precise move towards high-tech farming in India will reduce average cost, raise farmers' income, and address many other challenges of scale.
- Investing in Research and Innovation: In order to offset the impact of climate change on agriculture and work towards sustainable agriculture, an increase in research and innovation in the agricultural sector is necessary.
  - For instance, the livestock sector contributes the greatest amount of carbon emissions within the agriculture sector in India, therefore, assessing their impacts is crucial to finding sustainable solutions.
  - Innovative Technologies like <u>GIS (Geographical Information System)</u> and <u>AIML</u>
     (<u>Artificial Intelligence and Machine Learning</u>) are all bursting out to provide the basis for a revolutionary epoch in agriculture.
- Towards Biosecurity: Since, India is susceptible to pest and weed attacks, there is a need
  for a strategic and integrated approach to deal with the risks posed to animal and plant life and
  their health along with food safety of consumers.
  - M S Swaminathan, chairman of the <u>National Farmers Commission</u>, had also recommended establishing a <u>National Agricultural Biosecurity Program</u>.
- Upgrading Agricultural Surplus Management: An infrastructure upgrade and development program are needed for <u>post-harvest handling</u>, seed, fertiliser and agrochemical quality regulation.
  - Additionally, it is necessary to promote grading and standardisation of procurement centres.
- Harvesting Rich Returns Through Market Integration: There is a need to streamline domestic markets and put in place the infrastructure and institutions to connect local markets with national and global markets.
  - To facilitate smooth integration between domestic and world markets, and to manage trade liberalisation more effectively, India needs a nodal institution that can monitor world and domestic price movements closely and take timely and appropriate measures to avoid major shocks.

#### **Drishti Mains Question**

Trace India's transformation from food-deficit to a food-surplus nation. Highlight the challenges confronting agricultural growth.

#### **UPSC Civil Services Examination, Previous Year Question (PYQ)**

#### **Prelims**

#### Q.1 How is permaculture farming different from conventional chemical farming? (2021)

- 1. Permaculture farming discourages monocultural practices but in conventional chemical farming, monoculture practices are predominant.
- 2. Conventional chemical farming can cause an increase in soil salinity but the occurrence of such phenomenon is not observed in permaculture farming.
- 3. Conventional chemical farming is easily possible in semi-arid regions but permaculture farming is not so easily possible in such regions.
- 4. Practice of mulching is very important in permaculture farming but not necessarily so in conventional chemical farming.

#### Select the correct answer using the code given below.

- (a) 1 and 3
- (b) 1, 2 and 4
- **(c)** 4 only
- (d) 2 and 3

#### Ans: (b)

#### Q.2 Which of the following is the chief characteristic of 'mixed farming'? (2012)

- (a) Cultivation of both cash crops and food crops
- (b) Cultivation of two or more crops in the same field
- (c) Rearing of animals and cultivation of crops together
- (d) None of the above

#### Ans: (c)

## Q.3 With reference to micro-irrigation, which of the following statements is/are correct? (2011)

- 1. Fertilizer/nutrient loss can be reduced.
- 2. It is the only means of irrigation in dry land farming.
- 3. In some areas of farming, receding of ground water table can be checked.

#### Select the correct answer using the codes given below:

- (a) 1 only
- **(b)** 2 and 3 only
- (c) 1 and 3 only
- (d) 1, 2 and 3

Ans: (c)

#### **Mains**

- **Q.1** What are the present challenges before crop diversification? How do emerging technologies provide an opportunity for crop diversification? **(2021)**
- **Q.2** How has India benefited from the contributions of Sir M. Visvesvaraya and Dr. M. S. Swaminathan in the fields of water engineering and agricultural science respectively? **(2019)**
