

India Sets Emission Threshold in Green Hydrogen Standard

[Source: PIB](#)

Why in News?

The **Ministry of New and Renewable Energy (MNRE)** recently defined a clear [Green Hydrogen Standard](#), which establishes **emission thresholds for hydrogen production categorized as 'green'**.

- This significant development positions India at the forefront of global efforts towards sustainable energy solutions.

What is Green Hydrogen, and its Emission Threshold?

- **Definition of Green Hydrogen:**
 - “Green Hydrogen” shall mean **Hydrogen produced using [renewable energy](#)**, including, but not limited to, **production through [electrolysis](#) or conversion of biomass**.
 - Renewable energy also includes such electricity generated from renewable sources which is stored in an **energy storage system or banked with the grid in accordance with applicable regulations**.
- **Emission Threshold :**
 - The MNRE has determined that Green Hydrogen should have a **well-to-gate emission of not exceeding 2 kg carbon dioxide (CO₂) equivalent per kg Hydrogen(H₂), taken as an average over the last 12-month period**.
 - The well-to-gate emission includes water treatment, electrolysis, gas purification, drying and compression of hydrogen.
 - **Methodology and Monitoring:**
 - The MNRE will specify a detailed methodology for measuring, reporting, monitoring, on-site verification, and certification of green hydrogen and its derivatives.
 - The [Bureau of Energy Efficiency \(BEE\)](#), Ministry of Power, will serve as the **Nodal Authority** for accrediting agencies overseeing monitoring, verification, and certification of green hydrogen production projects.

What are India's Initiatives to Promote Green Hydrogen?

- **National Green Hydrogen Mission:**
 - India launched the [National Green Hydrogen Mission](#) with the objective of **producing 5 million metric tonnes of green hydrogen annually by 2030**.
 - The mission aligns with a **target of about 125 gigawatts of associated renewable energy capacity**.
 - The program offers **financial incentives to promote domestic production of electrolysers and green hydrogen**.
 - These incentives are designed to facilitate rapid scale-up, technology development, and cost reduction.

NATIONAL GREEN HYDROGEN MISSION

NODAL MINISTRY

- ▶ Ministry of New and Renewable Energy

OBJECTIVE

- ▶ Decarbonise energy/industrial/mobility sector
- ▶ Develop indigenous manufacturing capacities
- ▶ Create export opportunities for GH₂ and its derivative

COMPONENTS OF NGHM

- ▶ Strategic Interventions for Green Hydrogen Transition Programme (SIGHT)
- ▶ Strategic Hydrogen Innovation Partnership (SHIP) (PPP for R&D)

GH₂ is not commercially viable at present; current cost in India is around ₹350-400/kg. The National Hydrogen Energy Mission aims to bring it down under ₹100/kg.

Expected Outcomes by 2030

- ◆ At least 5MMT GH₂ annual production
- ◆ Rs 1 lakh crore fossil fuel import savings
- ◆ 6 lakh jobs
- ◆ 50MMT CO₂ annual emissions averted
- ◆ ₹ 8 lakh crore investment

HYDROGEN AND GREEN HYDROGEN

Hydrogen is the most common element in nature but exists only in combination with other elements. It has to be extracted from naturally occurring compounds (like water).

Green Hydrogen (GH₂) is made by splitting water through an electrical process called electrolysis, using an electrolyser powered by renewable energy (RE).

Green Hydrogen Consumption Obligations:

- The **MNRE** has proposed to introduce **green hydrogen consumption obligations** for fertilizer and the petroleum refining industry, like the renewable purchase obligations for electricity distribution companies.
 - The obligations will require these industries to consume a certain percentage of green hydrogen in their total hydrogen consumption.

UPSC Civil Services Examination, Previous Year Question (PYQ)

Q. Consider the following heavy industries: (2023)

1. Fertilizer plants

2. Oil refineries
3. Steel plants

Green hydrogen is expected to play a significant role in decarbonizing how many of the above industries?

- (a) Only one
- (b) Only two
- (c) All three
- (d) None

Ans: (c)

Need for Producing Green Hydrogen:

- Green hydrogen in particular is one of the cleanest sources of energy with close to zero emission. It can be used in fuel cells for cars or in energy-guzzling industries like **fertilizers and steel manufacturing**.
- Green Hydrogen can aid the desulfurisation of crude oil, without the output of CO₂ into the atmosphere hence it can provide a clean, on-site green hydrogen supply which will decarbonise the refining process and reduce emissions.
- **Hence option (c) is correct.**

Q. With reference to green hydrogen, consider the following statements : (2023)

1. It can be used directly as a fuel for internal combustion.
2. It can be blended with natural gas and used as fuel for heat or power generation.
3. It can be used in the hydrogen fuel cell to run vehicles.

How many of the above statements are correct?

- (a) Only one
- (b) Only two
- (c) All three
- (d) None

Ans: (c)
