

Release of Gharials

Why in News

Recently Government of Uttar Pradesh has released **Gharials** (*Gavialis gangeticus*) in the **Ghaghara** river for the conservation and protection in natural habitat.

Key Points

- Natural Habitat: Fresh waters of the northern part of India.
- Gharials, sometimes called gavials, are a type of Asian crocodilian distinguished by their long, thin snouts which **resembles a pot** (*ghara* in Hindi).
- Significance: Population of Gharials are a good indicator of clean river water.
- Gharials are a type of Crocodilians that also includes crocodiles, alligators, caimans, etc. India
 has three species of Crocodilians namely:
 - Gharial (Gavialis gangeticus): <u>International Union for Conservation of Nature (IUCN)</u>-Critically Endangered.
 - Mugger crocodile (Crocodylus palustris): IUCN- Vulnerable
 - Saltwater crocodile (Crocodylus porosus): IUCN- Least Concern
- In comparison to Crocodiles, Gharials are very shy and unharmful species.
- Primary Habitat: Chambal river
 - The chambal originates at the **Singar Chouri peak** in the northern slopes of the Vindhya mountains (Indore, Madhya Pradesh).
 - It joins the Yamuna River in **Etawah District of UP.**
 - Tributaries: Banas, Kali Sindh, Parbati.
 - The National Chambal Sanctuary is located along river Chambal on the tri-junction of Rajasthan, Madhya Pradesh and Uttar Pradesh. It is known for critically endangered gharials, the <u>red-crowned roof turtle</u>, and the <u>endangered Ganges river dolphin</u>.
- **Secondary Habitat:** Ghaghra and Gandak river, Girwa river (Katarniaghat Wildlife Sanctuary in Uttar Pradesh), the Ramganga river in Jim Corbett National Park and the Sone river.
- Status: Gharials are critically endangered in the <u>International Union for Conservation of</u>

Nature Red List of Species.

- Listed under Schedule I of the Wild Life (Protection) Act, 1972.
- Listed on Appendix I of Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES).
- Conservation Efforts: Breeding Centres of Kukrail Gharial Rehabilitation Centre in Lucknow, Uttar Pradesh, National Chambal Sanctuary (Gharial Eco Park, Madhya Pradesh).
- Threats:
 - Gharials **prefer sandbanks** as suitable habitats. Wild animals as well as humans often destroy their eggs.
 - Increased river pollution, dam construction, massive-scale fishing operations and floods.
 - Illegal sand mining and poaching.

Ghaghara River

- It acts as an important aquatic corridor for gharials in Uttar Pradesh.
- Its source is near Gurla Mandhata peak, south of Mansarovar in Tibet.
- It is known as the Karnaili in Western Nepal.
- It's important tributaries are the Sarda, the Sarju (Ayodhya is located on its bank) and the Rapti.
- The Ghaghara joins the Ganga a few kilometres downstream of Chhapra in Bihar.
- After reaching the plain area, its stream gets divided into many branches of which, Koriyab and The Vision Garwa are important.
- The river bed is sandy and sudden bends start occurring in the stream.
