

Improvement in India's Trade Deficit

Recently, India's <u>trade deficit</u> **showed significant improvement**, with exports and imports both declining, leading to a narrower trade gap.

- Merchandise exports in November 2023 decreased by 2.8% Year over Year (YoY) to USD 33.9 billion, while imports contracted by 4.3% to USD 54.98 billion, resulting in a trade deficit of USD 20.58 billion.
 - The trade deficit showed a significant decline from the high of USD 29.9 billion recorded in October 2023.
- Trade Deficit is an amount by which the cost of a country's imports exceeds its exports. It
 is a part of the <u>Current Account Deficit.</u>
- Decline in petroleum and engineering product shipments, which constitute nearly half of India's exports, contributed to the overall export contraction.
- Emerging sectors like electronics (23.56% growth) and positive contributions from gems and jewelry, iron ore, pharma, and minerals provided some support in November.
