

## Rising Sea Level

According to the data from Ministry of Earth Sciences, the four ports — Diamond Harbour, Kandla, Haldia and Port Blair — recorded a higher sea-level rise than the global average.

- While recent studies reveal that sea-level rise in the country has been estimated to be 1.3 mm/year along India's coasts during the last 40-50 years, at Diamond Harbour the rise was almost five times higher at 5.16 mm per year.
- The sea-level rise is higher in West Bengal, particularly in the Sunderbans delta because of the deltaic sediment deposition as a result of the mixing of freshwater and saline water.
- According to the fifth assessment report of the [International Panel on Climate Change](#)
  - Sea level rise is said to be linked with [global warming](#)
  - The global sea level was rising at an average rate of 1.8 mm per year over the last century.
- Rising sea levels may increase coastal hazards such as storm surge, tsunami, coastal floods, high waves and coastal erosion in the low lying coastal areas in addition to causing a gradual loss of coastal land to sea
- Studies over Indian region have shown a [warming trend](#) of 0.6°C on all India average basis.
