

Dung Based Formulations for Farming

Why in News?

Recently, <u>NITI Aayog</u> has released a report titled- "Production and promotion of organic and bio fertilizers with special focus on improving economic viability of gaushalas", recommending Capital Assistance to Cow Shelters to promote Dung-Based Fertilizers for Agriculture, thus promoting <u>Natural Farming</u>.

What are the Key Highlights of the Report?

- Need to Promote Dung-based Formulations:
 - Agriculture in India was based on an integrated approach of organic fertilizers. But after the Green Revolution. India could not maintain this balance and use of chemical fertilizers brought imbalance in the soil nutrients.
 - Cow shelters can address the problem of stray cattle that damaged crops in many parts of the country.
 - The number of stray and abandoned cattle had risen to a level beyond the
 resources available with existing gaushalas for their upkeep and sustenance and
 suggested channeling the potential of such cattle wealth for promoting natural and
 sustainable farming.
- Recommendations:
 - The government can help gaushalas through capital assistance so that they **could market cow dung and cow urine-based formulations** for applications in agriculture.
 - Gaushalas can be of great help in promoting natural farming and organic farming. Thus,
 complementarity can be built to promote gaushalas and natural farming.
- Significance:
 - Cow dung-based organic fertilizers will have a huge impact in fulfilling the
 constitutional mandate under Article 48 that the State shall take steps for preserving
 and improving cattle breeds, and prohibiting the slaughter of cows and calves, and other
 milch and draught cattle.

What is Natural Farming?

- Natural farming is a method of agriculture that seeks to create a balanced and self-sustaining ecosystem in which crops can grow without the use of synthetic chemicals or genetically modified organisms.
 - Instead of relying on artificial inputs like synthetic fertilisers and pesticides, natural farmers rely on techniques like <u>crop rotation</u>, intercropping, and <u>composting</u> to enhance soil health and support crop growth.
- Natural farming methods are often based on traditional knowledge and practices and may be adapted to local conditions and resources.
 - The goal of natural farming is to **produce healthy, nutritious food** in a way that is sustainable and environmentally friendly.

What are the Initiatives Related to Sustainable Agriculture?

Mission Organic Value Chain Development for Northeastern Region (MOVCDNER)

- National Mission on Sustainable Agriculture
 Paramparagat Krishi Vikas Yojana (PKVY)
 Sub-mission on AgroForestry (SMAF)
 Rashtriya Krishi Vikas Yojana
