

# **Making Peace with Nature: UNEP Report**

## Why in News

The United Nations Environment Programme (UNEP) has released the 'Making Peace with Nature' report, ahead of the fifth session of the UN Environment Assembly (UNEA-5).

 The Report explains how climate change, biodiversity loss and pollution add up to three self-inflicted planetary emergencies that are closely interconnected and put the well-being of current and future generations at unacceptable risk.

### **Key Points**

- Findings:
  - Planetary Emergencies:
    - Climate Change: Climate change is increasing the chances of the Arctic Ocean being ice-free in summer, further disrupting ocean circulation and Arctic ecosystems.
      - Climate change drives changes in <u>wildfires</u> and water stress and combines with biodiversity loss to degrade land and enhance drought in some regions.
    - Biodiversity Loss:
      - More than one million of the estimated 8 million plant and animal species are increasingly at risk of extinction.
      - <u>Coral reefs</u> are particularly vulnerable to climate change and are projected to decline to 10-30% of their former cover at 1.5°C of warming and to less than 1% at 2°C of warming, compromising food provision, tourism and coastal protection.
    - Pollution:
      - Every year, nine million people die prematurely due to pollution.
      - Up to 400 million tons of heavy metals, solvents, toxic sludge and other industrial wastes enter the world's waters annually.
  - Widening Inequalities:
    - Human prosperity is strained by widening inequalities, whereby the **burden of environmental decline weighs heaviest on the poor and vulnerable** and looms even larger over **today's youth and future generations.**
    - Inequity in economic growth has left 1.3 billion people poor.
  - Performance over SDGs:
    - Current and projected changes in climate, biodiversity loss and pollution make achieving the **Sustainable Development Goals (SDGs)** even more challenging.
    - The current mode of development degrades the Earth's finite capacity to

sustain human well-being.

- Performance over Different Targets:
  - Society is failing to meet most of its commitments to limit environmental damage.
  - Society is not on course to achieve<u>land degradation neutrality</u>, <u>Aichi Targets</u> and targets of the <u>Paris Agreement</u>.
- Suggestions:
  - **Human knowledge, ingenuity, technology and cooperation** can transform societies and economies and secure a sustainable future.
  - Given the interconnected nature of climate change, loss of biodiversity, land degradation, and air and water pollution, it is essential that these problems are **tackled together.**
  - Governments must **scale up and accelerate** action to meet the **Paris Agreement** goals and limit dangerous climate change.
  - **Economic and financial systems** can and must be transformed to lead and power the shift toward sustainability.
  - Moving to <u>circular economic systems</u> that reuse resources, reduce emissions and weed out the chemicals and toxins that are causing millions of premature deaths – all while creating jobs.

#### **United Nations Environment Programme**

- About: The UNEP is a leading global environmental authority established on 5th June 1972.
- Functions: It sets the global environmental agenda, promotes the sustainable development within the <u>United Nations</u> system, and serves as an authoritative advocate for global environment protection.
- Major Reports: Emission Gap Report, Adaptation Gap Report, Global Environment Outlook, Frontiers, Invest into Healthy Planet.
- Major Campaigns: Beat Pollution, UN75, World Environment Day, Wild for Life.
- Headquarters: Nairobi, Kenya.

#### **United Nations Environment Assembly**

- The United Nations Environment Assembly (UNEA) is the governing body of the UN Environment Programme.
- It is the world's highest-level decision-making body on the environment.
- It meets biennially to set priorities for global environmental policies and develop international environmental law.
- It was created in June 2012, during the United Nations Conference on Sustainable Development, also referred to as RIO+20.
