Adoption of Self-Driving Cars

For Mains: The Moral Dilemmas Faced by Self-Driving Cars

Why in News?

In a series of lawsuits and a criminal case arising out of fatal Tesla accidents, **Tesla faces its biggest** challenge since launching Autopilot in 2015.

What are the Moral Dilemmas Self-Driving Cars Face?

Predetermined Decisions:

- Self-driving cars are basically robots that have been programmed using algorithms.
 So, they are most likely to follow set rules or patterns in all cases.
- Giving Control to the Driver:
 - One of the biggest dilemmas of self-driving cars is whether it would be right to hand over the control to the driver at the last instant.
 - This will not only raise a question about the ethics of self-driving cars but also about the ethics of the driver.
- Rightful Deciders of the Ethics of Self-Driving Cars:
 - There is a debate about who should decide the ethics of self-driving cars, according to some.
 - It can be **argued that no one is the right owner to decide the ethics of self-driving cases.** The decision must lie in the hands of the driver of the car.
- Program the Car to Make an Impartial Decision:
 - Some also argue that the best way for a self-driving car is to make an impartial decision in case of accidents.
 - They **must not discriminate between humans based on age, gender, or other parameters.** They should always make the decision that causes the least impact.
- The Hacking Dilemma:
 - There is **always a risk of a cyber-criminal hacking** into the car's system to gain access to sensitive data or to carry out a misdeed.
 - For example, what if the autonomous car is hacked by a cybercriminal and commanded to carry out an accident to implicate the driver?

What are Self Driving Cars or Autonomous Cars?

- About:
 - An autonomous car is a vehicle capable of sensing its environment and operating without human involvement.
 - A human passenger is not required to take control of the vehicle at any time, nor is a human passenger required to be present in the vehicle at all.
 - An autonomous car can go anywhere a traditional car goes and do everything that an experienced human driver does.
- Benefits:

- Reduce traffic congestion
- Cut transportation costs by 40%
- Improve walkability and livability
- Free up parking lots for other uses
- Reduce urban CO2 emissions by 80% worldwide

Way Forward

As the debate around the topic intensifies due to the increasing adoption of self-driving cars, it is **hoped that strict laws and regulations will be developed** that can finally answer the questions in a correct, justifiable manner.

The Vision
