

## **Brucellosis**

### Why in News

Recently, Kerala launched preventive measures after a few cases of **brucellosis**, a **zoonotic infection**, have been detected in some dairy animals.

Earlier in September 2020 Brucella abortus S19Δ per vaccine" was developed by the Indian Council of Agricultural Research's -Indian Veterinary Research Institute (ICAR-IVRI) for brucellosis prevention in the dairy sector.

#### **Zoonotic Diseases**

- It is a disease that passes into the human population from an animal source directly or through an intermediary species.
- Zoonotic infections can be bacterial, viral, or parasitic in nature, with animals playing a vital role in maintaining such infections.
- Examples of zoonoses include <u>HIV-AIDS</u>, <u>Ebola</u>, <u>Malaria</u>, and the current <u>Covid-19 disease</u>.

# **Key Points**

- About:
  - It is a bacterial disease caused by various Brucella species, which mainly infect cattle, swine, goats, sheep and dogs.
  - It is also known as Malta fever or Mediterranean fever.
  - Brucellosis is endemic in India causing huge economic losses to dairy industry due to:
    - Infertility
    - Abortion
    - Birth of weak off springs
    - Reduced productivity
- Infection to Humans:
  - Infection:
    - Brucellosis has infected over 3000 people in China.
    - Humans generally acquire the disease through:
      - Direct contact with infected animals.
      - Eating, drinking contaminated animal products, unpasteurized milk.
      - Inhaling airborne agents.
    - The **US Centers for Disease Control and Prevention** states that person-toperson transmission of brucellosis is **"extremely rare"** but some symptoms may reoccur or never go away.

### Symptoms:

- Fever, sweats, malaise, anorexia (psychological disorder in which one eats less due to fear of weight gain), headache and muscle pain.
- Treatment and prevention:
  - It is usually **treated with antibiotics**, including rifampin and doxycycline.
  - Avoiding unpasteurised dairy products and taking safety precautions such as wearing rubber gloves, gowns or aprons, when handling animals or working in a laboratory can help prevent or reduce the risk of getting brucellosis.
  - Other preventive measures include **cooking meat properly, vaccinating domestic animals, etc.**
