

## Strait of Hormuz

### Why in News?

Recently, the United Arab Emirates and Iran's military have started their annual Drill in the coastal area of the **Gulf of Oman** and near the strategic Strait of Hormuz.

The maneuvers are aimed at improving readiness in confronting foreign threats and any possible invasion.

#### What is the Strait of Hormuz?

- The strait is located at the **mouth of the** <u>Persian Gulf</u> and is crucial to global energy supplies, with about a fifth of all oil traded at sea passing through it.
- The waterway separates Iran and Oman, linking the Persian Gulf to the Gulf of Oman and the Arabian Sea.
- The Strait is 33 km wide at its narrowest point, but the shipping lane is just three km wide in either direction.
- Most crude exported from Saudi Arabia, Iran, the UAE, Kuwait and Iraq all members of the
  <u>Organization of the Petroleum Exporting Countries (OPEC)</u> is shipped through this
  waterway.
- It is also the route used for nearly all the Liquefied Natural Gas (LNG) produced by the world's biggest LNG exporter, Qatar.
- The UAE and Saudi Arabia have sought to find other routes to bypass the Strait, including building more oil pipelines.

# **UPSC Civil Services Examination, Previous Year Questions (PYQs)**

- Q. Which one of the following straits is nearest to the International Date Line? (2008)
- (a) Malacca Strait
- (b) Bering Strait
- (c) Strait of Florida
- (d) Strait of Gibraltar

### **Ans:** (b)

- The International Date Line (IDL) is an imaginary line on the Earth's surface which functions as a "line of demarcation" separating two consecutive calendar dates.
- The IDL is located halfway around the world from the prime meridian (0° longitude) or about 180° east (or west) of Greenwich (London, UK), the reference point of time zones.
- The date line runs from the North Pole to the South Pole and marks the divide between the Western and Eastern Hemisphere.
- Despite its name, the IDL has no legal international status and countries are free to choose the dates that they observe.
- In the north, the date line swings to the east through the Bering strait and then west past the Aleutian Islands.
- Therefore, option (b) is the correct answer.
