

World Bank GDP Projection for India

Why in News

According to the <u>World Bank</u>, India's economy, South Asia's largest, is expected to grow by 8.3% in the fiscal year 2021-22.

- The **South Asia economic focus report** projects the **region to grow by 7.1% in 2021 and 2022.** It is **a biannual economic update** presenting recent economic developments and a near-term economic outlook for South Asia.
- Other Major reports of the World bank include <u>Human Capital Index</u>, <u>World Development Report</u>. Recently, it has decided to discontinue the practice of issuing '<u>Doing Business</u> reports'.

Key Points

GDP Growth:

 The projected growth (8.3%) is supported by an increase in public investment to bolster domestic demand and schemes like the <u>Production Linked Incentive (PIL)</u> to boost manufacturing.

Vision

- India's Gross Domestic Product (GDP) increased by 20.1% in the first quarter (April-June quarter) of financial year 2021-22 in the backdrop of "a significant base effect, limited damage to domestic demand and strong export growth".
- In the first quarter of financial year 2020-21, GDP of India contracted by 24.4% because of nationwide coronavirus lockdown.
 - The World Bank also observed that the disruption in India's economy during the second wave of the pandemic was limited, compared to the first.

On Economic Recovery:

- Economic recovery across various sectors in India has been unequal.
- Manufacturing & construction sectors recovered steadily in 2021 but low-skilled individuals, self-employed people, women and small firms were left behind.
- The extent of recovery in the financial year 2021-'22 will depend on how fast household incomes recover and activity across informal sector & smaller firms normalises.
- India's economic prospects will be determined by its pace of vaccination against <u>Covid-19</u> and successful implementation of agriculture & labour reforms.

Base Effect:

- Economic data such as 'GDP growth rate' are calculated on a year-on-year basis.
- Thus, a low growth rate in the previous year leads to a low base for the number in the current year.

Associated Risks:

 Risks associated with the extent of recovery include- worsening of financial sector stress, slowdown in vaccination, higher <u>inflation</u> constraining <u>monetary-policy</u> support etc.

Suggestions:

Medium Term Growth:

- It is **time to start rethinking policies about medium term growth** by learning lessons from Covid-19 like crisis.
- It's time to build **social protection and adopt greener policies**, because the next shock might be from the environment.
- To reduce inequality, it is very important to **integrate the informal sector and women into the economy.** So that should be also an important element of the medium term growth strategy.
- Need for Regulatory Experimentation:
 - The Bank called on **South Asian countries to lower entry barriers in the services sector,** creating more national and international competition while curbing the "emergence of new monopoly powers"; aiding labour market mobility and upgrading of skills; and enabling the absorption of these new services by households and firms.
