

Health Insurance for India's Missing Middle

Why in News

Recently, [NITI Aayog](#) has released a comprehensive report titled **Health Insurance for India's Missing Middle**.

- The report brings out the **gaps in the health insurance coverage** across the Indian population and **offers solutions** to address the situation.

Key Points

▪ Importance of Health Insurance:

- Health insurance is a mechanism of pooling the high level of **Out of Pocket expenditure (OOPE)** in India to provide greater financial protection against health shocks.
- Pre-payment through health insurance emerges as an **important tool for risk-pooling and safeguarding** against catastrophic (and often impoverishing) expenditure from health shocks.
- Moreover, pre-paid pooled funds can also improve the **efficiency of healthcare provision**.

▪ Health Insurance: Need And Landscape

- **Achieving Universal Health Coverage:** Expansion of health insurance coverage is a vital step, and a pathway in India's effort to achieve [Universal Health Coverage \(UHC\)](#).
 - Low Government expenditure on health has constrained the capacity and quality of healthcare services in the public sector.
 - It diverts the majority of individuals - about two-thirds - to seek treatment in the costlier private sector.
- **High Out-of-Pocket Expenditure:** India's health sector is characterized by low Government expenditure on health, high **out-of-pocket expenditure (OOPE)**, and low financial protection for adverse health events.
 - The private sector is characterized by high OOPE, leading to low financial protection
- **Missing Middle:** According to the report, **at least 30% of the population**, or 40 crore individuals (referred as the missing middle in this report) are devoid of any financial protection for health.
 - The [Ayushman Bharat - Pradhan Mantri Jan Arogya Yojana \(AB-PMJAY\)](#) and various State Government extension schemes, provide comprehensive hospitalization cover to the **bottom 50% of the population**.
 - Around the top **20% of the population** - 25 crore individuals - are covered through social health insurance, and private voluntary health insurance.

◦ **Existing Health Insurance, But not Suitable For The Missing Middle:**

- In the absence of a low-cost health insurance product, the missing middle remains uncovered despite the ability to pay nominal premiums.
- Affordable contributory products such as [Employees' State Insurance Corporation \(ESIC\)](#), and Government subsidized insurance including AB-PMJAY are closed products.
 - They are not available to the general population due to the risk of adverse selection.

▪ **Recommended Insurance Models:** The report has recommended **three models** for increasing the health insurance coverage in the country:

◦ **Creation of a Large and Diversified Risk Pool:** The success of a private voluntary contributory health insurance product requires creation of a large and diversified risk pool.

- For this to happen the Government should build consumer awareness of health insurance through **Information Education Communication campaigns**.

◦ **Developing a Modified, Standardized Health Insurance Product:** The cost of health insurance i.e., the premium needs to come down, in line with the affordability of the missing middle.

- **For example**, Aarogya Sanjeevani can be made affordable.
- Aarogya Sanjeevani is a standardised health insurance product launched by the [Insurance Regulatory Development Authority of India \(IRDAI\)](#) in April 2020.

◦ **Government Subsidized Health Insurance:** This model can be **utilized for segments of the missing middle** which remain uncovered, due to limited ability to pay for the voluntary contributory models outlined above.

- In the medium-term, once the supply-side and utilization of PMJAY is strengthened, their infrastructure can be leveraged to allow voluntary contributions to the missing middle.
- Government can provide public data and infrastructure as a public good to reduce operational and distribution costs of insurers.

Way Forward

- **Integrated Approach:** A combination of the three models, phased in at different times, can ensure coverage for the missing middle population.
- **Outreach Strategy:** Government databases such as [National Food Security Act \(NFSA\)](#), [Pradhan Mantri Suraksha Bima Yojana](#), or the [Pradhan Mantri Kisan Samman Nidhi \(PM-KISAN\)](#) for agricultural households can be shared with private insurers after taking consent from these households.

- This will **increase the outreach of insurance products** with the needy section of the population.
