

HIV/AIDS Outreach

The Ministry of Health and Family Welfare signed a Memorandum of Understanding (MoU) with the Ministry of Social Justice and Empowerment (MoSJE) for enhanced HIV/AIDS outreach.

- The MoU signing ceremony took place between the National AIDS Control Organisation (NACO) and the Department of Social Justice and Empowerment (DoSJE).
- Objective: To reduce the incidence of social stigma and discrimination against victims of drug abuse and Children and People Living with HIV/AIDS.
- Expected Outcome: The MoU will help in developing specific strategies and action plans for <u>HIV</u> and <u>AIDS</u> prevention and mechanisms for drug addiction treatment and extending social protection schemes to the vulnerable populations.

Situation in India

- The National AIDS Control Organisation (NACO) is a division of the Ministry of Health and Family Welfare that provides leadership to HIV/AIDS control programme in India through 35 HIV/AIDS Prevention and Control Societies.
- NACO has played a very big role in significantly reducing the prevalence of HIV/AIDS in the country and that too faster than the global rates.
 - More than 80% decline in estimated new infections from the peak of epidemic in 1995.
 - Estimated AIDS-related deaths declined by 71% since its peak in 2005.
 - As per the UNAIDS 2018 report, the global average for the decline in new infections and AIDS-related deaths from peak has been 47% and 51% respectively.
 - Established in 1996, **UNAIDS** has been leading and inspiring global, regional, national and local leadership, innovation and partnership to consign HIV to history. It is headquartered in **Geneva**, **Switzerland**.

India's Role in the Global Fight against AIDS

- There are 2 million new AIDS infections every year, and about 66% of the world population currently on antiretroviral therapy consumes drugs manufactured in India.
- Globally, the ART market is valued at .48 billion (in 2018) and is expected to reach .83 billion by
- Thus, Indian pharmaceutical companies, with their ability to manufacture high-quality, affordable medicines are very important in the global battle against AIDS.

Antiretroviral Therapy

- With neither a vaccine nor a cure in sight, Antiretroviral Therapy (ART) is the only option available for people living with HIV-AIDS.
- HIV is a type of virus called a retrovirus, and the combination of drugs used to treat it is called Antiretroviral Therapy (ART).
- According to the **World Health Organization**, standard ART consists of a combination of at least three antiretroviral drugs to suppress the HIV virus and stop the progression of the disease.
- Significant reductions have been seen in rates of death and suffering by the use of potent ART regimen, particularly in the early stages of the disease.
