

Seabuckthorn Plantation in the Cold Desert

Why in News

The **Himachal Pradesh government** has decided to start **planting seabuckthorn in the cold desert areas** of the state.

Key Points

दूरदर्शन
The Vision

▪ About Seabuckthorn:

- It's a **shrub** which produces an **orange-yellow coloured edible berry**.
- In India, it is found **above the tree line in the Himalayan region**, generally in **dry areas** such as the **cold deserts of Ladakh and Spiti**.
- In Himachal Pradesh, it is locally called **chharma** and **grows in the wild** in Lahaul and Spiti and parts of Kinnaur.
- A major part is covered by this plant in **Himachal Pradesh, Ladakh, Uttarakhand, Sikkim and Arunachal Pradesh**.

▪ The Seabuckthorn Plantation has many **Ecological, Medicinal and Economical benefits**.

◦ **Ecological Benefits:**

- Seabuckthorn is a **soil-binding plant** which **prevents soil-erosion**, checks **siltation in rivers** and helps **preserve floral biodiversity**.
- In the Lahaul valley, where willow trees are dying in large numbers due to pest attack, this hardy shrub is a good alternative for protecting the local ecology.
- Grows well in dry regions and becomes much more important especially in the light of reduced water flow from Himalayan glaciers.

◦ **Medicinal Benefits:**

- As a folk medicine, seabuckthorn has been widely used for **treating stomach, heart and skin problems**.
- Its fruit and leaves are **rich in vitamins, carotenoids and omega fatty acids**

and it can help troops in acclimatising to high-altitude.

- In the last few decades, scientific research worldwide has backed many of its traditional uses.
- **Economical Benefits:**
 - Seabuckthorn also has commercial value, as it is used in **making juices, jams, nutritional capsules** etc.
 - It is an important source of fuelwood and fodder.
 - However, **wild Seabuckthorn cannot sustainably supply raw material** to the industry, and the **plant needs to be cultivated** on a large scale as is being done in China.

Cold Desert in India

- The Cold Desert of India is situated in the Himalayas and **stretches from Ladakh in the north to Kinnaur (in the state of Himachal Pradesh)** in the south.
- The region has **harsh climatic conditions** such as very low rainfall and very high elevation (ranging from 3000 - 5000m Above Sea Level) that adds to the **coldness** in its environment.
- Blizzards, snowstorms and avalanches are common.
- The soil is not very fertile and the climatic conditions allow very short growing seasons making it a bare landscape.
- Water resources are minimal and comprise glacier-fed streams.

Tree Line

- The tree line is the edge of the habitat at which trees are capable of growing. It is found **at high elevations and high latitudes**.
- Beyond the tree line, trees cannot tolerate the environmental conditions (usually cold temperatures, extreme snowpack, or associated lack of available moisture).
