

Heatwave in States, including Jharkhand

Why in News?

Recently, the <u>India Meteorological Department</u> forecast <u>heatwave conditions</u> in parts of Karnataka, Odisha, West Bengal, **Jharkhand**, Andhra Pradesh and Yanam over the next two-three days.

Key Points

- The weather department has forecast a **harsh and arid summer** over a majority of regions of the country **during April-June 2024.**
 - There is a high probability of heatwave episodes lasting in a range of 10 to 20 days during the period.
- During April, the performance of the <u>pre-monsoon rainfall</u> shall be <u>below</u> average, mainly over coastal India, eastern and south peninsular India.
 - The rainfall forecast indicates that the dry weather since February 2024 would continue over these regions.
 - Aridity and shortage of water will aggravate during the summer season of 2024.

Heatwaves

- Heatwaves are prolonged periods of excessively hot weather that can cause adverse impacts on human health, the environment, and the economy.
- India, being a tropical country, is particularly vulnerable to heatwaves, which have become more frequent and intense in recent years.
- IMD Criteria for Declaring Heat Wave in India:
 - Heat waves need not be considered till the maximum temperature of a station reaches at least 40°C for Plains and at least 30°C for Hilly regions.
 - If the normal maximum temperature of a station is less than or equal to 40°C, then
 an increase of 5°C to 6°C from the normal temperature is considered to be heat
 wave condition.
 - Further, an increase of 7°C or more from the normal temperature is considered a severe heat wave condition.
 - If the normal maximum temperature of a station is more than 40°C, then an increase of 4°C to 5°C from the normal temperature is considered to be heat wave condition.
 Further, an increase of 6°C or more is considered a severe heat wave condition.
 - Additionally, if the actual maximum temperature remains 45°C or more irrespective of normal maximum temperature, a heat wave is declared.
