### Why in News?

Recently, the Meghalaya High court In the case of **Re: Cleanliness of Umiam Lake versus State of Meghalaya, 2023,** stated that "In the absence of any other employment opportunities the **natural beauty of the State should not be destroyed".** 

The Ruling shed light on the challenge of promoting tourism, infrastructure development, and construction while safeguarding the region's natural beauty.

### What is the Background?

- The Meghalaya High Court was hearing a <u>Public Interest Litigation (PIL)</u> on the cleanliness of the Umiam Lake.
- The Umiam Lake case brought attention to the adverse impact of unregulated construction and tourism on the lake and around the waterbody.
- The court emphasized that economic development shouldn't come at the cost of destroying the region's natural beauty.
- The Meghalaya Water Bodies (Preservation and Conservation) Guidelines, 2023, were criticized for inadequately addressing the issue of unchecked construction around water bodies, highlighting the need for more comprehensive regulations.

# How does the Biodiversity of Northeast Intersect with its Developmental Challenges?

- Biodiversity Hotspot:
  - Northeast India is a **green belt region due to its abundant natural resources** such as oil, natural gas, minerals and freshwater.
  - The <u>Garo-Khasi-Jaintia hills</u> and the Brahmaputra valley are **some of the most important biodiversity hotspots.**
  - Northeast India is a part of Indo-Burma hotspot.
- Concerns:
  - Though the northeast is industrially backward, **deforestation**, **floods**, **and existing industries are causing serious problems** to the environment in the region.
    - An environmental assessment of the North East Rural Livelihood Project

undertaken by the Ministry of Development of the North-eastern Region lays out that "**Northeast India lies within an ecologically fragile**, biologically rich region, highly prone to climatic changes, located in trans-boundary river basins.

 Both flora and fauna of the areas are under threat due to <u>Deforestation</u>, <u>Mining</u>, Quarrying, <u>Shifting Cultivation</u>.

#### Legal Framework and Challenges:

- The <u>Sixth Schedule of the Constitution</u> grants autonomy to District Councils, limiting state authority over land use.
  - This **autonomy** sometimes results in **inadequate regulations**, as seen in the case of Umiam Lake.
- PILs and judicial activism, under <u>Articles 32 and 226</u> of the Constitution, have played a pivotal role in enforcing environmental protections.
- The **National Green Tribunal's** imposing fines on states for environmental violations underscores the role of legal mechanisms in safeguarding the environment.

### How can Sustainable Growth be Promoted in the North East?

- North East Industrial Development Scheme:
  - The 'Negative List' within the <u>North East Industrial Development Scheme (NEIDS)</u>, 2017, is a commendable step, ensuring that entities adhering to environmental standards receive incentives.
  - If an entity is not complying with environment standards; not having applicable environmental clearances; does not have consent from the concerned pollution boards, it will not be eligible for any incentive under the NEIDS and will be put on the 'negative list'.
- Act Fast for North East:
  - The 'Act Fast for Northeast' policy should not only include "trade and commerce" but also the **preservation of "environment and ecology"** in the region.
- Uniform and Comprehensive Environmental Legislation:
  - To effectively address environmental issues at all governance levels, a uniform and comprehensive environmental legislation is crucial.
  - Such legislation would bridge gaps in regulations, ensuring that economic growth aligns with environmental sustainability.

## What are the Key Facts about Umiam Lake?

- Umiam Lake is one of the **biggest artificial lakes** in Meghalaya that is situated about 15 km from Shillong.
- The lake is a reservoir that was created as part of a dam construction project on the Umiam River (also known as Barapani River).
  - The dam was constructed to generate hydroelectric power for the region.
