

## **Term of Trade**

Over the last decade and a half, **Terms of Trade (ToT)** for Indian agriculture has shown significant improvement based on national income statistics.

- The ToT improvement in agriculture is attributed to the **global agri-commodity price boom** and policy interventions, especially minimum support price (MSP) hikes.
- **ToT** for Indian agriculture refers to the movement in prices of farm commodities relative to nonfarm goods and services.
  - Terms of trade refers to the ratio of agricultural prices to industrial prices, measured as price indices.
- A rise in the terms of trade implies better purchasing power for the agricultural sector in terms of industrial goods.
  - A ratio above one (or 100%) implies favorable pricing power, in terms of what farmers sell versus what they buy.
  - A TOT ratio below one indicates unfavorable conditions of exchange.
- The increase in procurement prices has led to a rise in food subsidy bills, contributing to fiscal deficit and macroeconomic management issues.
