

## **Liquid Nitrogen**

## Source: TH

The **Tamil Nadu Food Safety Department** has issued a circular on the use of liquid nitrogen saying the substance can only be used to preserve **packaged food**, and use other than this is prohibited.

- Liquid nitrogen is primarily used as Food Preservatives as it increases shelf-life of packaged foods.
  - It **expands** 700 times when it evaporates, displacing oxygen in the food pack and preventing microbial action, improving shelf life and freshness.
  - It is an Inert, colorless, odorless cryogenic fluid.
- It is also used in <u>cryotherapy</u> for <u>cancer</u> treatment. It can treat many <u>cancers</u>, including those of skin, bone, breast, cervical, eye, kidney, liver, lung, and prostate.
