

# IVF Breakthrough for the Great Indian Bustard Conservation

### Why in News?

**Recently**, a significant step was taken to save the <u>critically endangered</u> <u>Great Indian Bustard (GIB)</u> as a chick was successfully born through <u>In-Vitro Fertilization (IVF)</u>, marking a major milestone in conservation efforts for the species.

### **Key Points**

- IVF Success in Conservation:
  - A <u>Great Indian Bustard</u> chick was successfully born through <u>IVF</u>, a first for the species, giving a major boost to ongoing conservation efforts aimed at saving this <u>critically</u> endangered bird.
  - This breakthrough comes as the species faces severe population decline, largely due to habitat loss and collisions with power lines.
  - The chick was born under the <u>Species Recovery Programme</u> at the <u>Desert National</u>
     <u>Park</u> in Rajasthan, which is home to the last remaining wild population of GIBs.
- In-Vitro Fertilization (IVF):
  - It is a widely used assisted reproductive technology (ART) aimed at facilitating pregnancy when natural conception is difficult or impossible.
  - It involves a series of steps designed to allow fertilization of an egg outside the body, in a laboratory setting, before implanting the embryo back into the female's uterus. This process is now being applied in wildlife conservation, such as in the recent case of the **Great Indian Bustard**.
- Great Indian Bustard:
  - Habitat: Grasslands of Rajasthan, Gujarat, Maharashtra, and parts of Karnataka.
  - Conservation Status: Listed as "Critically Endangered" on the <u>International Union</u> <u>for Conservation of Nature (IUCN) Red List.</u>

#### **Desert National Park**

- It is situated on the western border of India within the Jaisalmer & Barmer Districts of Rajasthan.
- Great Indian Bustards, Rajasthan State animal (Chinkara), State tree (khejri) and State flower (Rohida) are found naturally at this park.
- It was declared a <u>UNESCO World Heritage Site in 1980</u> and National Park in 1992.

## **Kutch Bustard Sanctuary**

- The Kutch Bustard Sanctuary is located near Nalia in the Kutch district of Gujarat, India.
- It is the smallest sanctuary in the country, spread over just two square kilometres. The sanctuary, also known as the Lala-Parijan sanctuary, was declared in July 1992 primarily to safeguard the endangered Great Indian bustard.
- The sanctuary is home to three species of Bustards: the Great Indian bustard, lesser floricans, and

the Macqueen bustard.
