

Debt Sustainability and Exchange Rate Management

For Prelims: International Monetary Fund, Exchange Rate Dynamics, Credit Ratings, Interlinked Factors Related to India's Rising Debt Levels, <u>Tax evasion</u>, <u>Fiscal Responsibility and Budget Management Act</u>, 2003, IMF's Classification of Stabilised Arrangement

For Mains: IMF's Projections Related to India's Economic Outlook, Measures that India can take for Sustainable Debt Management

Source: TH

Why in News?

The <u>International Monetary Fund (IMF)</u> recently released its <u>annual Article IV</u> consultation report on India, addressing <u>critical issues concerning the nation's debt sustainability</u> <u>and exchange rate</u> <u>management.</u>

What are IMF's Projections Related to India's Economic Outlook?

- Debt Sustainability: The IMF flagged concerns about India's long-term debt sustainability.
 - It projected that India's general government debt, encompassing both the Centre and States, could potentially escalate to 100% of GDP by fiscal year 2028, particularly under adverse circumstances.
- Debt Management Challenges: The report highlighted the necessity for more prudent debt management practices, emphasizing the crucial need for financing to achieve climate change mitigation goals and enhance resilience against natural disasters.
 - The Indian Finance Ministry contested the IMF's debt projections, dismissing them
 as a worst-case scenario rather than an imminent reality.
- Exchange Rate Dynamics: The IMF reclassified India's de facto exchange rate regime to "stabilized arrangement" from "floating" for December 2022 to October 2023
 - This reclassification reflects observations about controlled fluctuations in the rupee's value due to interventions by the RBI.
- Stagnant Credit Ratings: Despite being lauded as the fastest-growing major economy, India's sovereign investment ratings have remained stagnant for a considerable period.
 - Agencies like Fitch Ratings and S&P Global Ratings have maintained India's credit rating at 'BBB- with stable outlook' since 2006, citing concerns about weak fiscal performance, burdensome debt, and low per capita income.

What is the Global Debt Landscape?

- **Rising Global Debt:** Globally, public debt has surged dramatically, surpassing **USD 92 trillion in 2022,** a more than fourfold increase since 2000, outpacing the growth of global GDP.
 - According to the UN, in 2022, 3.3 billion people live in countries that spend more on interest payments than on education or health.
 - Developing countries accounted for almost 30% of the total, of which roughly 70% is

attributable to **China, India and Brazil,** largely driven by diverse factors like the **pandemic, cost-of-living crisis, and climate change.**

- Debt Asymmetry Between Developed and Developing Nations: Developing countries, including those in Africa, contend with substantially higher borrowing costs compared to developed nations.
 - This disparity in borrowing rates compromises debt sustainability for developing nations, leading to **increased interest spending relative to public revenues.**

What is India's Current Debt Scenario?

- Government Current Debt Levels: The central government's debt stood at ₹155.6 trillion, approximately 57.1% of GDP by March 2023. Meanwhile, State governments carried a debt of about 28% of GDP.
 - As stated by the Finance Ministry, India's public debt-to-GDP ratio is 81% in 2022-23.
 This, is way higher than the levels specified by the FRBM target.
 - The 2018 amendment to the FRBM Act specified debt-GDP targets for the Centre, States and their combined accounts at 40%, 20% and 60%, respectively.
- Interlinked Factors Related to India's Rising Debt Levels:
 - **High Fiscal Deficit:** The government consistently spends more than it earns, leading to the deficit being financed through borrowing. This deficit can arise due to:
 - **High Expenditure Commitments:** Social welfare programs, <u>subsidies</u>, and defense spending significantly contribute to government outlays.
 - Slow Revenue Growth: Tax reforms haven't sufficiently boosted revenue collection, creating a revenue-expenditure gap.
 - Global Geopolitical Events: Events like the Russia- Ukraine war and rising commodity
 prices can lead to economic disruptions and higher import costs, forcing the government to
 borrow to maintain stability.
 - Informal Economy and Tax Leakage: India's large informal economy poses challenges for efficient tax collection.
 - <u>Tax evasion</u> and lack of formalization in sectors like agriculture and small businesses limit revenue generation, potentially forcing the government to rely on debt financing.
 - Guarantees and Contingencies: Government guarantees for loans taken by public sector entities or contingent liabilities, like potential losses from <u>public-private</u> <u>partnerships</u>, substantially add to the debt indirectly.
 - Exchange Rate Fluctuations: Fluctuations in exchange rates impact the cost of servicing foreign currency-denominated debt, potentially increasing the overall debt burden.
- Legislation for Debt Management in India:
 - Fiscal Responsibility and Budget Management Act, 2003 (FRBM Act): FRBM Act is an Indian law enacted to bring financial discipline to the government's fiscal operations and to reduce the country's fiscal deficit.
 - FRBMA aimed for specific debt-GDP targets for the Centre and States.
 - However, disruptions induced by the pandemic contributed significantly to elevated debt-GDP ratios, surpassing the specified thresholds.
 - Also, despite several years since its enactment, the Government of India has struggled to meet the FRBM Act targets.

What Differentiates Floating Exchange Rate Dynamics from Stabilized Arrangement?

- Floating Exchange Rate:
 - Market-Driven: Currency value is determined solely by supply and demand in the foreign exchange market, with minimal government intervention.
 - **High Volatility**: The exchange rate can fluctuate significantly in response to economic news, events, or market sentiment.

• **Promotes Flexibility:** Businesses and individuals can **adjust to changing economic conditions** through market-determined exchange rates.

Stabilized Arrangement:

- More Managed than Purely Floating: The government or central bank may intervene in the foreign exchange market occasionally to smooth out excessive volatility or maintain a target range for the currency.
- Moderate Volatility: Aiming for greater stability than a pure float, but still accepting some degree of fluctuation.
- Offers Predictability: Businesses and individuals can plan with a more stable exchange rate environment.

IMF's Classification of Stabilised Arrangement:

 The IMF classifies an exchange rate regime as a stabilized arrangement when it determines that the exchange rate has not moved beyond a 2% band in 6 months and that this stability has resulted from market interventions rather than market conditions.

What Measures can India Take for Sustainable Debt Management?

- Short Term: Fiscal Consolidation:
 - Targeted Reforms: Streamlining subsidies, reforming public sector enterprises, and reducing administrative inefficiencies and strict adherence to FRBM Act targets can free up resources for debt repayment and productive investments.
 - Improved Tax Efficiency: Strengthening tax administration and tackling tax evasion can significantly boost revenue without excessive borrowing.
- Long Term Growth-Oriented Strategies:
 - Skill Development and Education: Investing in human capital through education and skill development programs enhances productivity and competitiveness, leading to higher economic growth and improved tax collection.
 - Export Promotion: Diversifying export markets, incentivizing high-value exports, and addressing competitiveness challenges can boost foreign exchange earnings, potentially reducing the need for external debt.

UPSC Civil Services Examination, Previous Year Questions (PYQs)

Prelims:

Q. Consider the following statements: (2018)

- 1. The Fiscal Responsibility and Budget Management (FRBM) Review Committee Report has recommended a debt to GDP ratio of 60% for the general (combined) government by 2023, comprising 40% for the Central Government and 20% for the State Governments.
- 2. The Central Government has domestic liabilities of 21% of GDP as compared to that of 49% of GDP of the State Governments.
- 3. As per the Constitution of India, it is mandatory for a State to take the Central Government's consent for raising any loan if the former owes any outstanding liabilities to the latter.

Which of the statements given above is/are correct?

(a) 1 only

(b) 2 and 3 only

(c) 1 and 3 only

(d) 1, 2 and 3

Ans: C

Mains:

Q. Public expenditure management is a challenge to the Government of India in the context of budget-making during the post-liberalization period. Clarify it. **(2019)**
