

Eradication of Vilayati Babool | Rajasthan | 30 Aug 2025

Why in News?

The Panchayati Raj Minister of Rajasthan directed officials from the Panchayati Raj and Forest Department to conduct a study and issue guidelines for the complete removal of Vilayati Babool (*Prosopis Juliflora*), including its roots.

Vilayati Babool (*Prosopis juliflora*)

- **About:** Locally known as Vilayati Kikar or Gando Baval, it is an [invasive alien plant species](#) native to Mexico, South America, and the Caribbean, now prevalent in India's arid and semi-arid regions.
- **Impact:**
 - The rapid spread of *Prosopis Juliflora* hampers vegetation growth and depletes soil fertility, reducing agricultural productivity.
 - Its expansion destroys pasturelands, creating difficulties for livestock grazing and facilitating the spread of more plants.

Invasive Alien Species

- **About:** Invasive Alien Species are **non-native organisms** (plants, animals, fungi, or even microbes) introduced beyond their natural range, forming self-sustaining populations.
 - They outcompete native species, disrupt ecosystems, and cause **significant ecological**, economic, and social impacts.
 - According to the [Convention on Biological Diversity \(CBD\)](#), IAS are species that can "arrive, survive, and thrive", often outcompeting native species for resources.
 - In India, the [Wildlife Protection Act, 1972](#) defines IAS as non-native species that threaten wildlife or habitats.
- **Other Invasive Alien Species in India:** Animal species like African catfish, Nile tilapia, red-bellied piranha, alligator gar, [Red-eared Slider](#) (a North American turtle) and plants like Lantana and [Water Hyacinth](#) are among the most widespread invasive species in India.
