

India's Disinvestment Strategy in FY25

Source: BS

The Indian government's **disinvestment** receipts in FY25 are at their lowest since **2014-15**, signaling a strategic shift from aggressive stake sales to optimizing **Public Sector Enterprises (PSEs)** performance.

- **Disinvestment Receipts:** As of FY25, the government has accrued only **Rs 9,319 crore** (lower than **Rs 16,507 crore in FY24**) through disinvestment, marking the lowest level since 2014-15 despite post-pandemic economic recovery.
- **Shift in Disinvestment Policy:** Since **FY24**, the government has stopped setting annual **disinvestment targets**, moving towards a "**value creation**" approach for PSEs.
 - The new strategy includes **higher capital expenditure, improved dividends, phased market dilution, and strategic privatization where feasible.**
- **Disinvestment:** It is the government's process of selling its stake in PSEs to raise funds, reduce fiscal burden, and boost private participation. It includes **Strategic Disinvestment** (full or substantial stake sale with management transfer) and **Minority Stake Sale** (partial sale without management transfer).
 - Disinvestment methods include **Initial Public Offer** for unlisted companies, **Further Public Offer** for listed ones, **Offer for Sale** for quick stake dilution, **Buyback of Shares** to consolidate ownership or utilize surplus cash, and **Exchange Traded Funds (ETF).**
 - The disinvestment process is conducted by the **Department of Investment and Public Asset Management** under the Ministry of Finance.
