

Revised MIS Guidelines

Source: PIB

The government has **revised [Market Intervention Scheme \(MIS\)](#)** guidelines to encourage more States to implement MIS.

- MIS supports **perishable crops (fruits, vegetables, spices, etc.)** that are not covered under [MSP](#), preventing **distress sales** during **price drops** from **excess production**.
- **Revised Provisions of MIS:**
 - Made MIS a **component** of the integrated scheme of [PM-AASHA](#).
 - MIS is activated only if **market prices fall by at least 10%** from the previous normal year.
 - The **coverage limit for procurement** has been **raised from 20% to 25%** of total production.
 - Instead of physical procurement, states can **transfer the price difference** between the **Market Intervention Price (MIP)** and the **selling price** directly to farmers' **bank accounts**.
 - [NAFED](#) and [NCCF](#) will reimburse **storage and transport costs** for TOP crops (tomato, onion and potato) when **price gaps** exist between **producing and consuming states**.
 - [FPOs](#), [FPCs](#), and state-nominated agencies will handle **procurement, storage, and transport** to stabilize market fluctuations.
